
ExciteWave Introduces Reso 2, an Ultra-Slim Sound System That Turns Any Case Into Studio-Quality Audio

Two magnetic sound pucks and a removable, air-travel-ready power pack transform toolboxes, camera cases and hard-shell luggage into premium Bluetooth sound systems. Reservations are open now for \$1.

LOS ANGELES, CA - ExciteWave Innovations, a Los Angeles-based audio technology company, today announced Reso 2, its patent-pending, ultra-slim sound system built to transform the case a person already owns into a full-range stereo speaker. Rather than packing a separate speaker, Reso 2 mounts directly inside a hard-shell case, tool case, or travel case, turning it into premium, studio-quality audio wherever it goes.

How It Works

Reso 2 installs with a simple peel-stick-play process: two compact, ultra-slim sound pucks (exciters) adhere to the inside of a case lid, paired with a removable, USB-C rechargeable power pack that connects magnetically for easy, safe removal before air travel. The system delivers up to 12 hours of continuous playback, connects over Bluetooth 6.0 with Auracast, and is controlled through the ExciteWave mobile app, where a proprietary tuning algorithm automatically tunes the case to the listener's preferences. Users can also select preset listening profiles, build their own, or link multiple Reso 2 units together for a larger sound stage.

Fits the Case You Already Own

Reso 2 is designed to work with the equipment people already carry, with no proprietary case required. It is compatible with widely used hard-shell case brands such as Pelican, DeWalt, and Milwaukee, as well as standard hard-shell travel suitcases, making it a fit for tradespeople and contractors, content creators, business travelers, adventure enthusiasts, and audio professionals alike.

“Reso 2 came from a simple idea: the case you already carry can be your sound system, so you never have to choose between packing your gear and packing your music,” said the ExciteWave Innovations founding team.

Availability

Reso 2 is available to reserve now for a fully refundable \$1 deposit at excitewave.com, with an expected retail price of \$239.99. Shipping is coming soon, and reservation holders pay the remaining balance when their unit ships. Early reservation holders receive priority shipping, exclusive updates on development progress, a full refund if not completely satisfied, and early access to the companion app.

About ExciteWave Innovations

ExciteWave Innovations is a tech-forward audio brand transforming everyday containers into high-fidelity Bluetooth sound systems, blending innovation, portability, and premium sound into one seamless solution. Based in Los Angeles, California, the company is guided by a practical, minimalist approach to design and a focus on professional-grade audio quality. Learn more at excitewave.com.
